USEIN AKBAR

+6281287475131 | https://www.linkedin.com/in/usein-akbar/ | useinakbar01@gmail.com | Jakarta, Indonesia

Frontend developer with 2+ years of experience in building frontend web applications. Be able to develop responsive and interactive applications, represent UI design in code, integrate data with APIs, and collaborate with a product development team. I previously had hands-on experience of developing various web application projects using Javascript ecosystem.

Education

Telkom University

Bachelor of Information System | 2020–2024 | GPA 3.84

During the study in the Information System department, I gained a deep understanding of web and mobile application development, programming algorithms, and data structures. Courses such as Data Structures and Algorithms, Web and Mobile Application Development gave me a solid foundation in HTML, CSS, Javascript, React as well as an understanding of UI/UX with Design Thinking methods.

Experiences

Frontend Developer • Sagara Technology

February 2024 - July 2024 | Bandung, Indonesia

- Develop and optimize the frontend of the IT certification dashboard and certification exam platform.
- Implement new features and functionality for student certification needs.
- Slicing UI, integrating APIs that are related with students, instances, exam, assessment, questions and answers.
- Tech stack: Reactjs, Redux, Tailwind CSS, DaisyUI, React Query, Gitlab.

Hacksprint • 1000 Startup Digital Kominfo RI

September 2023 - October 2023 | Bandung, Indonesia

- Design a solution sprint to find solutions based on user pain problems that are related to challenges in finding sports buddies.
- Conduct market research to determine market segmentation and early adopters.

Frontend Developer • Jobhun

June 2023 - September 2023 | Remote

- Develop and maintain Jobhun's main website by collaborating with backend developer and product designer to enhance user experience.
- Ensures user interface compatibility with various devices and browsers.
- Slicing UI, integrating APIs that are related with experts, mentors, filter options, and fixing bugs.
- Tech stack: Vuejs, Tailwind CSS, Github.

Business Incubation Program 2022 • Bandung Techno Park

June 2022 - March 2023 | Bandung, Indonesia

- Being selected to participate in business incubation program called BTPIP with the startup name SportGather and received pre-seed funding worth IDR 10 million. Led a team and developed SportGather Venue, an MVP product that is used for booking sports facility schedules. The tech stack used is Reactjs and Tailwind CSS.
